

## 1. layout document

Since we are making a forum type website, it is better to keep everything simple and easy to read. Based on this, we chose a blue which will not easily get tired of watching for the major color of our website. On the top of every single page once logged in, there is a navigation bar including the main page button, searching and my account button. Also, the major part of the page is basically posts from users, this is the core function of our website. Posts will be in the middle of the site with white background and between each posts, there will be lines to separate them apart. Posts will be displayed as a topic in bold, an image(optional) and its starting lines. Since some of the posts will contain multiple images, users are only going to see the first image of them on the main page. For the account page, navigation bar will stand still and right below that, it is the basic account information listed. Also, users' action will be recorded and shown on the account page such as liked post. Lastly, for logging in and signing up pages, we would like to keep them as simple as possible. Instead of our site name, only necessary stuff will be shown.

## 2. site map

## 3. Logic Process

User will first enter the main page. In this page, they will be able to get the titles of each question posted. When they click the question, they will be directed to the detail page of each questions, from here, they will be able to see the answers for questions. When they want to answer the questions or like the answers, they will be directed to the login page, where they have to log in or sign up before taking any actions. When they logged in, the log in button in the main page will turn to personal profile page. When they click on the button, they are able to see their personal information, as well as pages they have liked or starred.

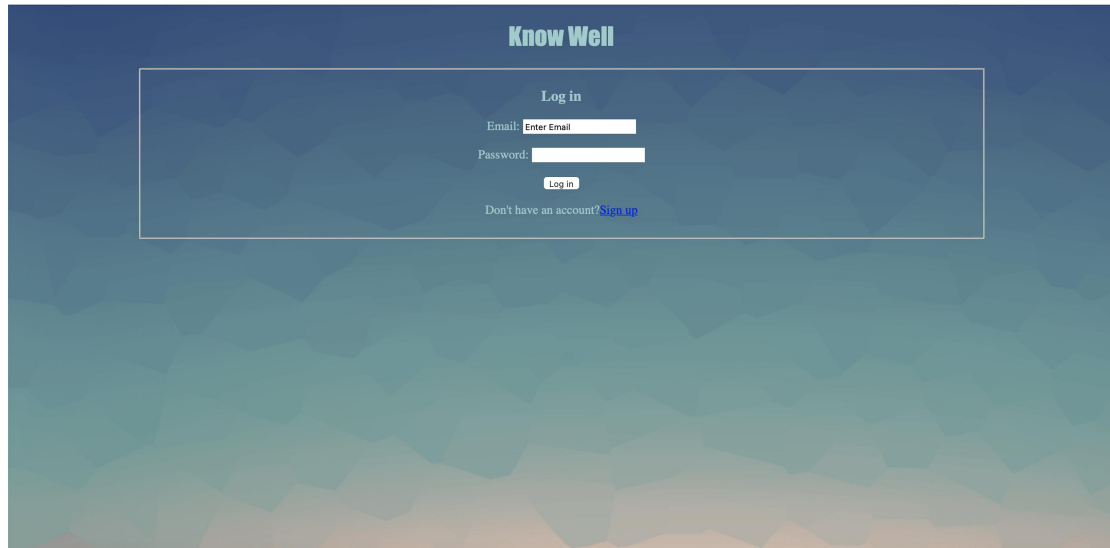

## 4. Discussion

Our design is into a simple style. We do not want to put everything in our main page. We only put our main functions on our site. So in every page except for the signin, we have a top bar which can direct you to every part of our site. We also design a right bar on our

main page, we can put Topics or news in the right bar where people can click on it and get access to the details. In the middle we put the main content of our website--ask and answers. In the top bar, we also contain the search bar, the signin button(which will shifted into sign in button) and Post button.

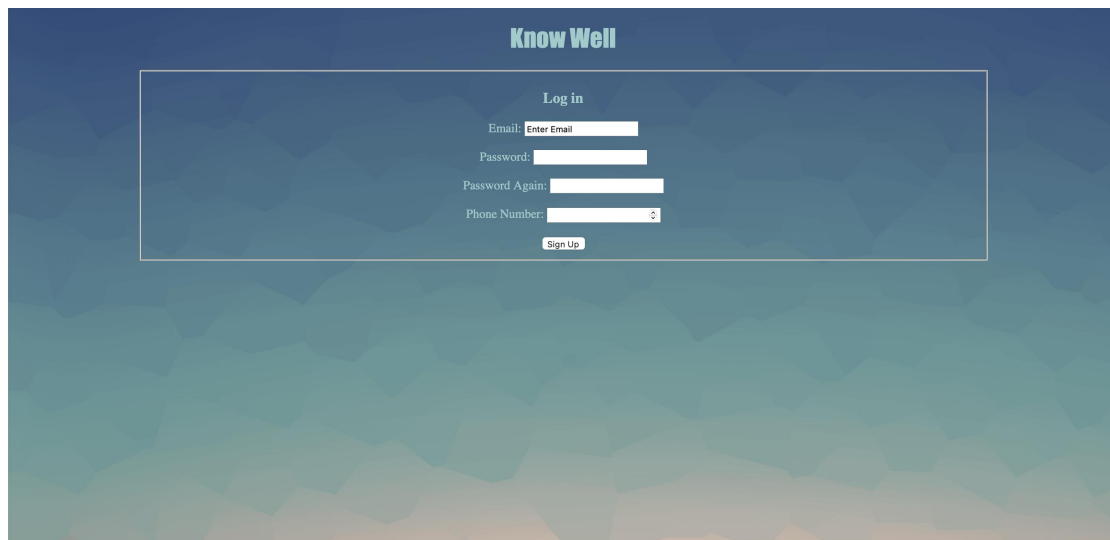

## 5. Client side validation

Code is included in the repository.

The image shows a login form for a website titled "Know Well". The form is centered on a dark blue background with a subtle geometric pattern. It contains the following elements:

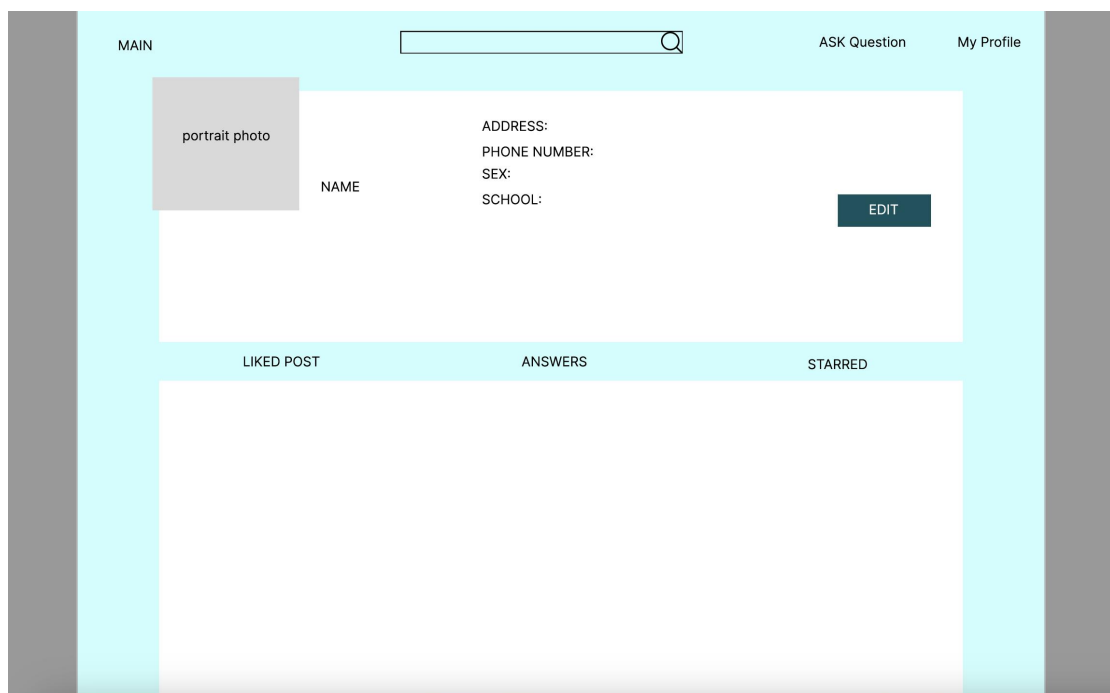

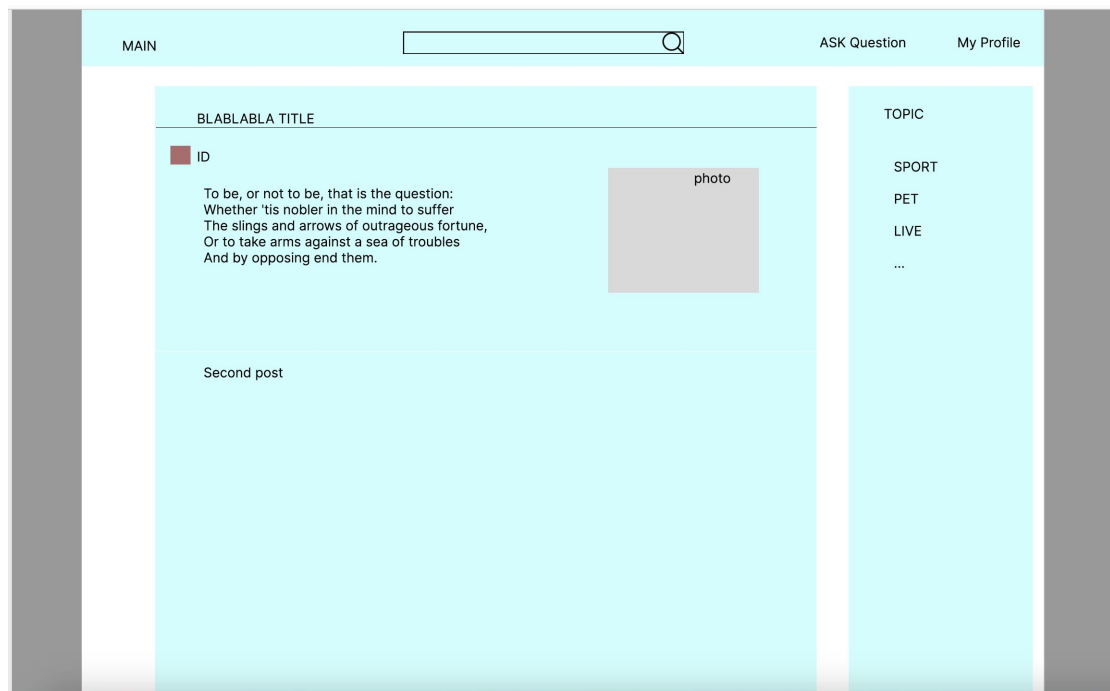

- Header:** "Know Well" in a light blue, sans-serif font.
- Section Header:** "Log in" in a small, white, sans-serif font.
- Email Field:** Labeled "Email:" with a placeholder text "Enter Email" inside a white input box.
- Password Field:** Labeled "Password:" with a white input box.
- Login Button:** A small, white button with the text "Log in".
- Footer:** A link that says "Don't have an account? [Sign up](#)" in a small, white, sans-serif font.

The image shows a sign up form for a website titled "Know Well". The form is centered on a dark blue background with a subtle geometric pattern. It contains the following elements:

- Header:** "Know Well" in a light blue, sans-serif font.
- Section Header:** "Log in" in a small, white, sans-serif font.
- Email Field:** Labeled "Email:" with a placeholder text "Enter Email" inside a white input box.
- Password Field:** Labeled "Password:" with a white input box.
- Password Again Field:** Labeled "Password Again:" with a white input box.
- Phone Number Field:** Labeled "Phone Number:" with a white input box and a small icon of a phone handset.
